

Custom Made

Orthotics

Important Information

Foot orthotics are commonly used in the treatment of a number of lower limb conditions. They act to alter abnormal biomechanical stresses on the components of the lower limb or to alter weight-bearing pressures on the foot.

Functional foot orthotics can assist the following:

- Plantar fasciitis/fasciosis
- Hallux valgus (bunions)
- Sesamoiditis
- Nerve entrapment (Morton's Neuroma)
- Tendinopathy
- Lower limb stress fractures
- Tibial periostitis (shin splints)
- Patello-femoral pain syndrome
- Support and cushioning for arthritic and/or diabetic feet

Our orthotics are manufactured from EVA, a high density composite foam material that is comfortable, user-friendly and suitable for a range of loads, foot pathology and activity levels.

Dr Gerard Taylor and Dr Scott Isbel undertake orthotic assessment using contact scanning and computer aided design technology to measure your corrected foot posture. Our orthotic technician then manufactures your customised functional foot orthotics using CAD-CAM technology.

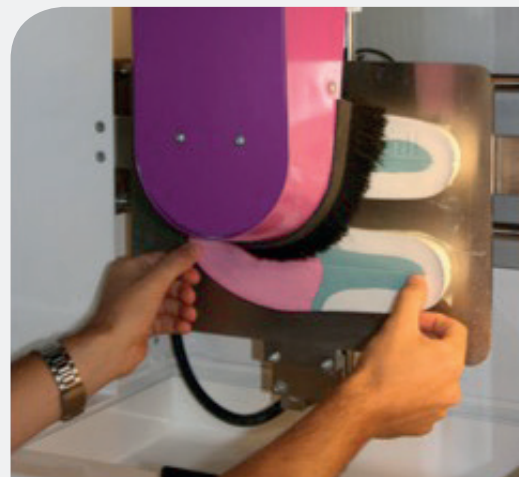

To book an appointment call [9382 9600](tel:93829600)

Orthotics Benefits

- Cushioned, comfortable and supportive
- Hand finished to match existing footwear
- Selection of firm to soft orthotic densities to match your requirements
- Feet are scanned in a weight bearing position
- Choice of covers from soft cushioning to firm resistant

Health Fund Rebates

At Sportsmed Subiaco, our orthotics can usually be manufactured and ready for use within a twenty-four hour period. Health fund rebates may apply with appropriate level of cover, consult your health fund.
